

Tropical Cyclone Report  
Tropical Depression Three-E  
(EP032007)  
11-12 June 2007

James L. Franklin  
National Hurricane Center  
12 July 2007

Tropical Depression Three-E developed from a tropical wave that crossed the west coast of Africa on 24 May and entered the eastern North Pacific around 6 June. Convection associated with the wave increased, and a broad area of low pressure formed a few hundred miles south of Acapulco on 8 June. The disturbance moved northwestward and gradually became better organized over the next couple of days, and the system became a depression on 11 June, about 450 n mi south of the southern tip of Baja California. The depression moved northwestward over cooler waters and through a stable air mass, degenerating to a remnant low late the following day.

Table 1. Best track for Tropical Depression Three-E, 11-12 June 2007.

Date/Time (UTC)	Latitude (°N)	Longitude (°W)	Pressure (mb)	Wind Speed (kt)	Stage
11 / 1200	15.5	110.3	1005	30	tropical depression
11 / 1800	16.2	111.0	1005	30	"
12 / 0000	17.0	111.6	1004	30	"
