U. S. Weather Research Program
Joint Hurricane Test Bed
2001-2009

Dr. Jiann-Gwo Jiing
Chief, Technology and Science Branch
National Hurricane Center
& JHT Director
April 28, 2009
Outline

1. USWRP Hurricane at Landfall
2. JHT Mission
3. Major Activities 2001-09
4. Current State of NHC Hurricane Forecast
5. Recent Government investments - HFIP
USWRP
Initial scientific foci for FY 2000-2006

• Landfalling hurricanes;
• Heavy precipitation and flooding, focusing on the optimal use of data and improved numerical precipitation guidance;
• Societal and economic impacts.
NHC yearly-average track forecast errors
1970-2000

( 72-h Linear trend line: - 52 % in 31 years)
Some are more difficult to forecast. The outliers – we didn’t know which one
The outliers – and you don’t know when
TRACK GUIDANCE FOR HURRICANE ALBERTO

0000 UTC 12 AUGUST, 2000
NHC yearly average wind speed forecast errors and trend

(LITTLE OR NO SKILL IN 2-3 DAY INTENSITY FORECASTS)
USWRP goals relating to hurricane landfall forecasting

– 1. To reduce landfall track and intensity forecast errors by 20%.
– 2. To increase warning lead-time to and beyond 24 hours with 95% confidence without increasing the present 3-to -1 overwarning.
– 3. To make skillful (compared to persistence) forecasts of gale- and hurricane-force radii out to 48 hours with 95% confidence.
– 4. To extend quantitative precipitation forecasts out to 3 days and enhance skill of day-3 predictions to improve inland flooding forecasts.
Fig. 1. Schematic of the relationship of the USWRP to the continuum from basic research to operations and services and to agency-specific technology-infusion programs. Within the region of overlap in applied research responsibilities are the national testbed facilities. Research ideas...
JHT Mission Statement

The mission of the Joint (NOAA, Navy, and NASA) Hurricane Test Bed is to transfer more rapidly and smoothly new technology, research results, and observational advances of the USWRP, its sponsoring agencies, the academic community and other groups into improved tropical cyclone analysis and prediction at operational centers.
Major Activities 2001-2009

Establishing the JHT 2001-02

• Funded initial round of 10 projects for a first year (FY01) (Mar - Sep 2001)
• Developed Terms of Reference (Mar 2001- May 2002)
  – Including establishment of the process and criteria for a successful transfer from research to operations
• Appointed Director and 2 administrative assistants (all 25% NOAA FTE) (2001)
• Formed Steering Committee (Mar 2002)
• Renewed 9 of 10 first round projects for a second year (FY02) (June 2002)
• Procured hardware (Q3 2002)
• Hired IT Facilitator (Jul 2002)
• Completed three round of projects.
• Fourth round of projects will complete in August 2009
• Fifth round projects selected and will start before August 2009
Summary of JHT projects
2001-2009

• 1) **Number of projects supported: 50**
  – 41 completed, 30 accepted for operational implementation
  – Number of projects rejected: 5
  – Number of projects completed but pending further investigation (decisions deferred): 5
  – Number of projects in process: 9

• 2) **Implementation**
  – Number of projects implemented: 26.5
    • Number of numerical modeling related projects implemented by EMC/NCO: 10
    • Number of projects implemented by NHC: 16.5
  – Number of projects accepted but not yet fully implemented by NHC: 3.5

Note:
• 1) Implementation is defined when a project is completed, accepted, and the technique installed on NCEP/NCO or NHC operational systems and runs on operational time frame.
• Some techniques were “implemented” on JHT platform for testing.
Activities associated with each funding cycle

- Preparation, revision, and legal review of Announcement of Federal Funding Opportunities (AFFO)
- AFFO released through Federal Register Notice (FRN)
  - Open to government, academic, and private sector applicants worldwide
  - List forecast center priorities
  - List forecast center IT configuration, available data and format.
  - List project selection criteria
  - List criteria for operational acceptance
- Review of pre-applications
- Review of full proposals
Activities associated with each funding cycle

- JHT Directors recommend projects for funding
- NHC assigns Point of Contacts (POC) for each project. POCs work with PIs and forecasters to define timelines/deliverables
- Real-time testing and evaluation activities
- PIs presented updates (annual reports) at annual Interdepartmental Hurricane Conference (IHC) (www.ofcm.gov)
- Review of second year funding for 2-year projects
Activities associated with each funding cycle

• PIs submit final reports when projects end
• POCs and forecasters provide feedback to the JHT
• JHT document IT evaluation on each project
• JHT prepare final evaluation results and submit to NHC Director
• NHC Director makes final decisions on operational acceptance
• NHC/EMC/NCO implement accepted projects/techniques
In the Federal Announcement

• Operational Centers’ forecast Improvement Needs (Complementary to USWRP goals)
  – NHC highest priorities, for example:
    • Rapid intensity changes
    • “Guidance on guidance”
    • Precipitation amount and distribution
    • Track outliers
    • Improved observational systems
    • Tropical cyclone size
  – EMC highest priorities, for example:
    • General model improvements
    • Improved boundary layer representation for coupled models
    • Improved targeting strategies for surveillance missions
    • Model validation techniques
    • Diagnostic techniques
Personnel

• Quarter-time Director (NOAA FTE)
• 7-member Steering Committee
  – Three from NOAA (one TPC/NHC), two from DOD, and two from the academic community
  – TPC member serves as co-Chair
• Two quarter-time administrative assistants (NOAA FTE)
• One IT Facilitator (contractor)

Computing Resources

• Server and workstations
• Software
NHC Contributions to JHT

**Logistics**
- Dedicated physical space in operations, offices

**Personnel**
- TPC dedicating about 1.5 FTE spread across ~12 people
  - 0.5 FTE reimbursed by USWRP for quarter-time JHT Director and one quarter-time JHT administrative assistant
  - TPC contributing 1.0 FTE, including TPC member on JHT Steering Committee, forecasters, and technical support staff
- Forecaster and technical points of contact (POC)
- Programming, system administration, and network support
- Administrative support

**Computing Resources**
- Network connectivity
- Operational data flow
PIs / POCs connect on public JHT side
Completion of a project:

Input for JHT Project Reports to the TPC Director

- Project PI final report
- JHT staff members’ assessments
- TPC Point of Contact (POC) feedback
- JHT IT Facilitator report
  - IT transfer status
  - Compatibility and support issues
  - Estimates of costs to implement and support
  - Input from TPC Technical Support Branch Chief
Factors in NHC Director’s Decisions for Operational Implementation
(Listed in the AFFO announcement)

• **Forecast or Analysis Benefit**: expected improvement in operational forecast and/or analysis accuracy

• **Efficiency**: adherence to forecaster time constraints and ease of use needs

• **Compatibility**: IT compatibility with operational hardware, software, data, communications, etc.

• **Sustainability**: availability of resources to operate, upgrade, and/or provide support
Implementation

- Some relatively easy
- Some very complicated
- NHC contributes ~0.5 FTE/yr on implementation
- JHT IT facilitator assists in the process
- NCEP/EMC and NCO also contributed

Operational Centers are not funded for this task

JHT 2nd Round Implemented Projects

- Track Uncertainty Estimates (Goerss)
- Inner Core SSTs (Cione)
- GFDL/URI Hurricane Model upgrades (Bender; Ginis)
- Probability of rapid intensification - ENP (Kaplan)
- Rain-CLIPER & rainfall verification (Rogers)
- Doppler Winds (Gamache)
- SHIPS & Wind Probabilities (DeMaria/Knaff)
- Genesis forecasting assessments (Harr)
- 5 day CLIPER – NWP, ENP, ATL (Aberson)
Highlights of 3rd Round Implemented Projects

VORTRAC – Lee/Bell/Harasti

OLD GFDL (2)
NEW GFDL (4)
OLD GFS (1)
NEW GFS (3)

GFDL – Bender

Topographic Wind Effects - Miller

HWRF – Tuleya, Powell
Highlights of 3rd Round Implemented Projects

- Inclusion of Dropsonde Moisture into GFS – Aberson/Dunion
- Corrected Consensus Track Forecasts - Goerss
- Revised SHIPS intensity forecast scheme – DeMaria/Knaff
- Wind Radii Decay Model - Kaplan
Highlights of 3rd Round Implemented Projects

- Wind Radii Decay Model - Kaplan
- Improvements to ATCF operating system - Sampson
- Enhancements to Wind Probability Products – Knaff/DeMaria
- SFMR - Carswell/Black
## 2008 Atlantic Verification

### NHC Official Forecasts

Values in green exceed all-time records.

* 48 h track error for TS and H only (GPRA goal) was 87.5 n mi, just off last year’s record of 86.2.
Errors have been cut in half over the past 15 years. 2008 was best year ever.
PERFORMANCE OF TRACK MODELS OVER THE YEARS:
NOTE THAT THE TOP PERFORMER CHANGES ALMOST EVERY YEAR!
PERFORMANCE OF TRACK MODELS OVER THE YEARS:
NOTE THAT THE TOP PERFORMER CHANGES ALMOST EVERY YEAR!
No progress with intensity.
Figure 2. Selected wind observations and best track maximum sustained surface wind speed curve for Hurricane Ike, 1 – 14 September 2008. Aircraft observations have been adjusted for elevation using 90%, 80%, and 80% reduction factors for observations from 700 mb, 850 mb, and 1500 ft, respectively. Dropwindsonde observations include actual 10 m winds (sfc), as well as surface estimates derived from the mean wind over the lowest 150 m of the wind sounding (LLM), and from the sounding boundary layer mean (MBL). Objective Dvorak estimates represent linear averages over a three-hour period centered on the nominal observation time. Dashed vertical lines correspond to 0000 UTC. Solid vertical lines correspond to landfalls.
Funding Distribution Comparison
Increased funding to researchers outside of NOAA

FY2002
$1.2M

- Navy (NPS, NRL) and USAF 12%
- State and Private Universities 23%
- NOAA 65%

FY2003
$1.35M

- Navy (NPS, NRL) 15%
- State and Private Universities 34%
- Private Companies 2%
- NOAA 49%
4th Round (FY07-08) Recommended Funding Distribution
Total $1.04M ($1.5M announced)

- Private Companies 24%
- NOAA 20%
- State and Private Universities 33%
- Navy (NPS, NRL) 11%
- NASA 12%

Mission Statement

The mission of the Joint Hurricane Test Bed is to transfer more rapidly and smoothly new technology, research results, and observational advances of the United States Weather Research Program (USWRP), its sponsoring agencies, the academic community and other groups into improved tropical cyclone analysis and prediction at operational centers.

WHAT'S NEW

Updated May 8, 2006:
Please read about the new projects for 2007-2009

Updated November 21, 2006:
The JHT FY07 AFFO Application Deadline has been reopened.

Updated June 16, 2006:
The JHT FY07 Announcement of Federal Funding Opportunity has been released.

Added April 26, 2006:
• The 2005 First Year Reports are available in the Project Table
• Joint Hurricane Test Bed (JHT): 2006 IHC Update: Dr. Jian-Ping Jing, JHT Director, Technical Support Branch Chief, TPC/NHC, Interdepartmental Hurricane Conference, 22 March 2005 presentation. (PDF format)
